

Concept Mapping

Instructions

Review the session's content by **defining key terms** and linking them in a **concept map**.

1. Define key terms. Write a brief (~1 sentence) definition of each of the terms below.
Note: key terms continue onto next page.
2. Link terms in a concept map. On the reverse of this page are a series of blank boxes connected by arrows. Each arrow describes the link between the concepts.

Key terms

Term	Definition
'whole' numbers	Numbers without decimals
integer	The type containing “whole” numbers
logical	The type containing boolean TRUE and FALSE
logical(), integer(), double(), character()	Functions for creating “blank” vectors of the corresponding type
